32-2087: Thymosin Î²4 Protein

Alternative Name: Thymosin beta-4,T beta 4,Fx ,TB4X,PTMB4,TMSB4.

Description

Source: Thymosin b4 is a 43 amino acid peptide which is regarded as the main intracellular G-actin sequestering peptide. It has a molecular weight of 4963.55 Da, and its molecular formula is: C212H350N56078S1. Extracellular Thymosin b4 may contribute to physiological processes such as angiogenesis, wound healing, and regulation of inflammation. Thymosin b4 has an a.a. sequence of Ac-Ser-Asp-Lys-Pro-Asp-Met-Ala-Glu-Ile-Glu-Lys-Phe-Asp-Lys-Ser-Lys-Leu-Lys-Lys-Thr-Glu-Thr-Glu-Lys-Asn-Pro-Leu-Pro-Ser-Lys-Glu-Thr-Ile-Glu-Glu-Lys-Gln-Ala-Gly-Glu-Ser-OH. Thymosin is a hormone secreted from the thymus. Its primary function is to stimulate the production of T cells, which are an important part of the immune system. Thymosin also assists in the development of B cells to plasma cells to produce antibodies. The predominant form of thymosin, thymosin b4, is a member of a highly conserved family of actin monomer-sequestering proteins. b-thymosins are the primary regulators of unpolymerized actin, and are essential for maintaining the small cytoplasmic pool of free G-actin monomers required for rapid filament elongation and allowing for the flux of monomers between the thymosin-bound pool and F-actin.

Product Info

Amount: 5 mg

Purification: Greater than 98.0% as determined by RP-HPLC.

Content: The protein (1 mg/ml) was lyophilized with no additives.

Lyophilized Thymosin b4 although stable at room temperature for 3 weeks, should be stored

desiccated below -18°C. Upon reconstitution T beta 4 should be stored at 4°C between 2-7 days

and for future use below -18°C. For long term storage it is recommended to add a carrier protein

(0.1% HSA or BSA). Please prevent freeze-thaw cycles.

Amino Acid: Thymosin b4 has an a.a. sequence of Ac-Ser-Asp-Lys-Pro-Asp-Met-Ala-Glu-Ile-Glu-Lys-Phe-Asp-

Lys-Gln-Ala-Gly-Glu-Ser-OH.

Application Note

Storage condition:

It is recommended to reconstitute the lyophilized Thymosin beta-4 in sterile 18MÃ \square Â \square -cm H2O not less than 100 Ã \square Â μ g/ml, which can then be further diluted to other aqueous solutions.
