

32-2127: ADPRH Recombinant Protein

Alternative Name : [Protein ADP-ribosylarginine] hydrolase,ADP-ribosylarginine hydrolase,ADP-ribose-L-arginine cleaving enzyme,ADPRH,ARH1.

Description

Source : E.coli. ADPRH Human Recombinant produced in E.coli is a single, non-glycosylated polypeptide chain containing 381 amino acids (1-357) and having a molecular mass of 42.1kDa.ADPRH is fused to a 24 amino acid His-tag at N-terminus & purified by proprietary chromatographic techniques. ADP-ribosylarginine hydrolase (ADPRH) is a member of the ADP-ribosylglycohydrolase family. ADPRH catalyzes the removal of mono-ADP-ribose from arginine residues of proteins in the ADP-ribosylation cycle. The human ADPRH enzyme is DTT-independent as opposed to the rat and mouse enzymes, which require DTT for maximal activity.
