

32-2230: CTDSPL Recombinant Protein

Alternative Name :

CTD small phosphatase-like protein,CTDSP-like,Carboxy-terminal domain RNA polymerase II polypeptide A small phosphatase 3,NIF-like protein,Nuclear LIM interactor-interacting factor 1,NLI-interacting factor 1,Protein YA22,hYA22,RBSP3

Description

Source : Escherichia Coli. CTDSPL Human Recombinant produced in E.coli is a single, non-glycosylated polypeptide chain containing 209 amino acids (82-265) and having a molecular mass of 23.9kDa.CTDSPL is fused to a 24 amino acid His-tag at N-terminus & purified by proprietary chromatographic techniques. CTD small phosphatase-like protein (CTDSPL) specially catalyzes the dephosphorylation of 'Ser-5' within the tandem 7 residues repeats in the C-terminal domain (CTD) of the biggest RNA polymerase II subunit POLR2A. CTDSPL negatively regulates RNA polymerase II transcription, probably by directing the transition from initiation/capping to processive transcript elongation. CTDSPL is employed by REST to neuronal genes which contain RE-1 elements, directing to neuronal gene silencing in non-neuronal cells.
