## 32-2552: MMP 8 Recombinant Protein

Alternative Name: Neutrophil collagenase,EC 3.4.24.34,Matrix metalloproteinase-8,MMP-8,PMNL collagenase,PMNL-CL,HNC,CLG1.

## **Description**

Source: Escherichia Coli. Matrix Metalloproteinase-8 Human Recombinant produced in E.Coli is a single, non-glycosylated, polypeptide chain having a molecular mass of 75 kDa. The MMP-8 is purified by proprietary chromatographic techniques. Full-length recombinant human neutrophil pro-collagenase (MMP-8), latent form. Matrix metalloproteinase 8 (MMP-8), or neutrophil collagenase, degrades interstitial collagens, acting preferentially on collagen type I. Increased full-length MMP-8 protein was associated with infiltration into the skin of neutrophils, which are the major cell type that expresses MMP-8. MMP-8 is synthesized and stored in specific granules in neutrophil leukocytes. MMP-8 activity is therefore regulated by factors such as surface-bound ligands (IgG or complement components) that release it through degranulation. Once released and activated through proteolytic or oxidative mechanisms, MMP-8 plays a major role in the connective tissue turnover that accompanies inflammatory processes.

## **Product Info**

Amount: 2.5U

**Purification :** Greater than 90% as determined by SDS-PAGE.

Content: The MMP-8 protein solution (100 units/ml) in 0.05M Tris-HCl buffer, pH 7.6, 0.2M NaCl, 5mM

CaCl2, 0.0025% NaN3 and 0.1% BSA.

Storage condition:

Storage condition:

Store at 4°C if entire vial will be used within 2-4 weeks. Store, frozen at -20°C for longer periods

of time. Avoid multiple freeze-thaw cycles.

## **Application Note**

100 units/ml after activation with APMA by solution assay method. One unit of collagenolytic activity is defined as the cleavage of  $1\tilde{A}$   $\hat{A}$   $\hat{A}$  of collagen per minute by the solution method.
