

32-2596: NDUFS4 Recombinant Protein

Alternative Name AQDQ,NDUFS4,NADH dehydrogenase [ubiquinone] iron-sulfur protein 4 mitochondrial,NADH-ubiquinone oxidoreductase 18 kDa subunit,Complex I-18 kDa,CI-18 kDa,Complex I-AQDQ,CI-AQDQ.

Description

Source : Escherichia Coli. NDUFS4 Human Recombinant produced in E.Coli is a single, non-glycosylated, polypeptide chain containing 134 amino acids (43-175 a.a.) and having a molecular mass of 15.5 kDa.The NDUFS4 is purified by proprietary chromatographic techniques. NDUFS4 is a subunit of the mitochondrial membrane respiratory chain NADH dehydrogenase (Complex I), the primary multi-subunit enzyme complex of the mitochondrial respiratory chain. Complex I is involved in cellular ATP production, the main source of energy for numerous vital processes in living cells. NDUFS4 removes electrons from NADH and passes them by a series of diverse protein-coupled redox centers to the electron acceptor ubiquinone. NDUFS4 presents a hotspot of mutations in the genetic apparatus of oxidative phosphorylation and the correct assembly of the subunit it encodes is essential for completion of the assembly of complex I.
