Alternative Name : O-Sialoglycoprotein Endopeptidase,T(6)A37 Threonylcarbamoyladenosine Biosynthesis Protein OSGEP,TRNA Threonylcarbamoyladenosine Biosynthesis Protein OSGEP,N6-L-Threonylcarbamoyladene Synthase,T(6)A Synthase,HOSGEP,GCPL1

Description

Source : Escherichia Coli. OSGEP Human Recombinant produced in E.Coli is a single, non-glycosylated polypeptide chain containing 358 amino acids (1-335 a.a) and having a molecular mass of 38.8kDa. OSGEP is fused to a 23 amino acid His-tag at N-terminus & purified by proprietary chromatographic techniques. O-Sialoglycoprotein Endopeptidase, also known as OSGEP is a member of the KAE1 / TsaD family. OSGEP is essential for the formation of threonylcarbamoyl group on adenosine at position 37 (t6A37) in tRNAs which read codons beginning with adenine. OSGEP take a direct catalytic part in the above reaction, however other proteins of the complex are required to fulfill this activity.
