32-2855: TOP1 Recombinant Protein

Alternative Name: DNA topoisomerase 1,EC 5.99.1.2,DNA topoisomerase I,TOP1,ScI-70.

Description

Source: Sf9 insect cells. DNA Topoisomerase-I Human Recombinant produced in SF9 is a glycosylated, polypeptide chain having a molecular mass of 91,576 Dalton (excluding glycosilation) 102 kDa total mass. The TOP1 is expressed with a -6xHis tag and purified by proprietary chromatographic techniques. DNA toposisomerase I is a key nuclear enzyme that interconverts supercoiled DNA to the required topological conformations for normal DNA replication and transcription. This enzyme is the target antigen for the so-called ScI-70 autoantibodies. ScI-70 antibodies are a specific marker in ScIeroderma patients (specificity 98-100%) and are associated with the presence of diffuse skin involvement and pulmonary fibrosis.In human tissues the DNA topoisomerase I is initially synthesized as a protein with 100 kDa molecular weight. Most of this precursor is then proteolytically processed to a species with 70 kDa molecular weight from which the ScI-70 antigen has derived its name.

Product Info

Amount: 20 μg

Purification : Greater than 95% as determined by SDS-PAGE.

Content: TOP1 is supplied in 16mM HEPES buffer pH-7.5, 400mM sodium chloride, and 20% glycerol.

Storage condition:

Storage condition:

Store at 4°C if entire vial will be used within 2-4 weeks. Store, frozen at -20°C for longer periods af time. Avoid multiple frozen thank exclass.

of time. Avoid multiple freeze-thaw cycles.
