32-2920: UPP1 Recombinant Protein

Alternative Name: Uridine phosphorylase, EC 2.4.2.3, UrdPase, UPase, StUP.

Description

Source: Escherichia Coli. Uridine phosphorylase Salmonella typhimurium Recombinantproduced in E.Coli is a nonglycosylated, polypeptide having a total molecular mass of 163068 Dalton. Uridine phosphorylase from Salmonella typhimurium (StUP) catalyzes the reversible phosphorolysis of uridine with the formation of ribose-1-phosphate and uracil.

Product Info

Amount: 50 µg

Purification: Greater than 95.0% as determined by SDS-PAGE.

Content: The UPase was lyophilized from 1mg/ml solution containing 25mM Tris-HCl, pH 8.0, 0.15M NaCl.

Lyophilized UPase although stable at room temperature for 3 weeks, should be stored desiccated

below -18°C. Upon reconstitution UPase should be stored at 4°C between 2-7 days and for future Storage condition:

use below -18°C.For long-term storage it is recommended to add a carrier protein (0.1% HSA or

BSA). Please prevent freeze-thaw cycles.

Application Note

It is recommended to reconstitute the lyophilized UPase in sterile 18MΩ-cm H2O not less than 100 µg/ml, which can then be further diluted to other aqueous solutions.
