32-2977: CK2b Active Recombinant Protein (Discontinued)

Alternative Name: Casein kinase II subunit beta, CK II beta, Phosvitin, G5a, CK2B, CK2B, CK2B, MGC138222, MGC138224.

Description

Source: Escherichia Coli. Casein Kinase 2 beta Human Recombinant is a non-glycosylated polypeptide having a molecular mass of 24.9 kDa. Casein Kinase 2 is purified by proprietary chromatographic techniques. The Casein kinase 2 (EC2.7.11.1) is a serine/threonine-selective protein kinasethat is a tetramer of two alpha subunits and two beta subunits. The alpha subunits have the catalytic kinase domain. Casein kinase 2 has been implicated in cell cyclecontrol, DNA repair, regulation of the circadian rhythmand other cellular processes. Casein kinase 2 activity has been reported to be activated following Wnt signaling pathwayactivation. A Pertussis toxin-sensitive G proteinand Disheveled appear to be an intermediary between Wnt-mediated activation of the Frizzled receptor and activation of casein kinase 2. Mice that lack casein kinase 2 alpha prime have a defect in the morphology of developing sperm.

Product Info

Amount: 10 µg

Purification: Greater than 95% as determined by SDS-PAGE.

Content: CSNK2B lyophilized from 25mM Tris-HCl, 500mM NaCl, 1mM DTT, 1mM EDTA, protease inhibitor

cocktail, pH 8.5.

Lyophilized CSNK2B although stable at room temperature for 3 weeks, should be stored

Storage condition:

desiccated below -18°C. Upon reconstitution CSNK2B should be stored at 4°C between 2-7 days

and for future use below -18°C. For long term storage it is recommended to add a carrier

protein (0.1% HSA or BSA). Please avoid freeze-thaw cycles.

Application Note

Solubilize in distilled H2O or 50% glycerol.
