

32-3165: Ag85B Recombinant Protein

Alternative Name : Antigen 85-B,85B,Extracellular alpha-antigen,Antigen 85 complex B,Ag85B,Mycolyl transferase 85B,EC 2.3.1.-,Fibronectin-binding protein B,30 kDa extracellular protein,fbpB,A85B,Major Secretory Protein Antigen 85B.

Description

Source : Escherichia Coli. Ag85B Recombinant His-Tag fusion protein produced in E.Coli is a single, non-glycosylated polypeptide chain having a molecular mass of 30kDa. Antigen 85B Mycobacterium Tuberculosis-is the most abundant protein exposed by M. Tuberculosis, as well as a potent immunoprotective antigen and a leading drug target. Ag85 induces strong T-cell proliferation and IFN-g secretion in most healthy individuals exposed to M. tuberculosis, in BCG-vaccinated mice and humans, whereas the antibody against Ag85 are more prevalent in active tuberculosis patients with decreased cellular immune response.
