

32-3204: ANXA8 Recombinant Protein

Alternative Name : ANX8,Annexin-8,Annexin VII,Vascular anticoagulant-beta,VAC-beta.

Description

Source : Escherichia Coli. ANXA8 Human Recombinant produced in E.Coli is a single, non-glycosylated, polypeptide chain containing 347 amino acids (1-327 a.a.) and having a total molecular mass of 39 kDa. ANXA8 is fused to a 20 amino acid His Tag at N-terminus and is purified by proprietary chromatographic techniques. ANXA8 is part of the annexin family of evolutionarily conserved Ca^{2+} and phospholipid binding proteins. ANXA8 is an anticoagulant protein that functions as an indirect inhibitor of the thromboplastin-specific complex, which takes part in the blood coagulation cascade. Where co-expressed in the same tissues, ANXA8 is expressed at a 100-fold lower level than Annexin A5. Though, ANXA8 is preferentially expressed in acute promyelocytic leukemia (APL) cells which suggests its involvement in hematopoietic cell differentiation.

Product Info

Amount :	20 μg
Purification :	Greater than 90.0% as determined by SDS-PAGE.
Content :	The ANXA8 1mg/ml protein solution contains 20mM Tris-HCL pH-8, 1mM DTT, 1mM EDTA, 0.1M NaCl and 10% Glycerol.
Storage condition :	Store at 4°C if entire vial will be used within 2-4 weeks. Store, frozen at -20°C for longer periods of time. Please avoid freeze thaw cycles.
