## 32-3294: Batroxobin Recombinant Protein (Discontinued)

Alternative Name Thrombin-like enzyme batroxobin, EC 3.4.21.74, BX, Bothrops atrox serine proteinase, Venombin-: A,Defibrase, Reptilase, Batroxobin.

## **Description**

Source: Pichia Pastoris. The Batroxobin Recombinant Protein, produced in yeast, is a single, glycosilated polypeptide chain containing 231 amino acids and having an Mw of approximately 28-33 kDa. Batroxobin is a serin protease that reduces fibronogen levels and is originally extracted from snake venom of Bothrops Atrox. Batroxobin is used in defibrinogenation and thrombolysis and also has an effect on c-fos gene and growth factor.Batroxobin can efficiently restrain proliferation of VSMCs, by blocking the release and uptake of Ca2+, thus influencing [Ca2+]i.Batroxobin is a single chain glycopeptide with a molecular mass of 43kDa on SDS-PAGE gel and its pl-6.6. Batroxobin converts fibrinogen to fibrin through the restricted release of fibrinopeptide-A from fibrinogen to promote blood to clot. Unlike thrombin, it is not affected by heparin and hirudin.

## **Product Info**

Amount: 10 µg

**Purification:** Greater than 97.0% as determined by(a) Analysis by RP-HPLC.(b) Analysis by SDS-PAGE.

Content: The Batroxobin protein was lyophilized from a concentrated (1mg/ml) solution containing 20mM

sodium acetate buffer, pH 7.4.

Batroxobin although stable at room temperature for 3 weeks, should be stored below -18°C. Upon

reconstitution Batroxobin should be stored at 4°C between 2-7 days and for future use below

-18°C. For long term storage it is recommended to add a carrier protein (0.1% HSA or

BSA). Please prevent freeze-thaw cycles.

## **Application Note**

Storage condition:

It is recommended to reconstitute the lyophilized Batroxobin in sterile 18M-cm H2O not less than  $100\mu g/ml$ , which can then be further diluted to other aqueous solutions. Batroxobin's biological activity was found to be of no less than 500KU/mg. (Klobusitzky Unit). One KU is defined as the amount of enzyme which coagulates standard human plasma incubated at  $37^{\circ}C$  in vitro within  $60 \pm 20$  seconds.
