

32-3402: CALM2 135 a.a. Recombinant Protein

Alternative Name : CALM2,CAM2,CAMB,CAMII,PHKD2,calmodulin 2.

Description

Source : Escherichia Coli. CALM2 Human Recombinant full length protein expressed in E.coli, containing 135 amino acids and having a Molecular Weight of approximately 16 kDa. The Accession number is NP_001734. Calmodulin (CaM) is an intracellular receptor protein for Ca²⁺-ions. It activates the myosin light chain kinase which is the catalyst of myosin phosphorylation. CaM participates in the activation of enzymes such as cyclic nucleotide- dependent phosphodiesterase, calcineurin, ATPase, Myosin Light Chain Kinases, and CAM kinase.
