

32-3516: CFL2 Recombinant Protein

Alternative Name : Cofilin-2, Cofilin- muscle isoform, CFL2, NEM7.

Description

Source : Escherichia Coli. CFL2 Human Recombinant produced in E.Coli is a single, non-glycosylated polypeptide chain containing 186 amino acids (1-166 a.a.) and having a molecular mass of 20.9kDa. CFL2 is fused to a 20 amino acid His-tag at N-terminus & purified by proprietary chromatographic techniques. CFL2 protein is a member of the actin-binding proteins ADF family which contains 1 ADF-H domain. Cofilin is a broadly distributed intracellular actin-modulating protein which binds and depolymerizes filamentous F-actin and inhibits the polymerization of monomeric G-actin in a pH-dependent manner. Defects in the CFL2 gene are the cause of nemaline myopathy type 7 (NEM7).
