## Description

Source : E.coli. CYTH3 Human Recombinant produced in E.coli is a single, non-glycosylated polypeptide chain containing 422 amino acids (1-399) and having a molecular mass of 48.7 kDa . CYTH3 is fused to a 23 amino acid His-tag at N -terminus \& purified by proprietary chromatographic techniques. Cytohesin 3 (CYTH3) belongs to the PSCD family, whose members have identical structural organization which consists of an N -terminal coiled-coil motif, a central Sec7 domain, and a C-terminal pleckstrin homology $(\mathrm{PH})$ domain, and seem to mediate the regulation of protein sorting and membrane trafficking. CYTH3 is involved in the regulation of Golgi structure and function, and it might have a physiological role in regulating ADP-ribosylation factor protein 6 (ARF) functions, in addition to acting on ARF1.
