

32-3680: DLX3 Recombinant Protein

Alternative Name : Homeobox protein DLX-3,DLX3,Distal-Less Homeobox 3,AI4,TDO.

Description

Source : Escherichia Coli. DLX3 Human Recombinant produced in E.Coli is a single, non-glycosylated polypeptide chain containing 209 amino acids (1-186 a.a) and having a molecular mass of 23.4kDa. DLX3 is fused to a 23 amino acid His-tag at N-terminus & purified by proprietary chromatographic techniques. DLX3 belongs to the Distal-less (Dlx) family of genes which includes at least 6 different members. DLX3 plays a regulatory role in the development of the ventral forebrain and also in craniofacial patterning and morphogenesis. Mutation in DLX3 is correlated with Trichodontoosseous syndrome which is an autosomal dominant condition. DLX3 is located in a tail-to-tail configuration with another member of the gene family on the long arm of chromosome 17.
