

32-4289: Recombinant Human Neuroblastoma 1

Alternative Name : D1S1733E,DAN,DAND1,NB,NO3,Neuroblastoma suppressor of tumorigenicity 1,DAN domain family member 1,Zinc finger protein DAN,NBL1.

Description

Source : E.coli. NBL1 Human Recombinant produced in E.Coli is a single, non-glycosylated polypeptide chain containing 187 amino acids (18-181 a.a) and having a molecular mass of 20kDa. NBL1 is fused to a 23 amino acid His-tag at N-terminus & purified by proprietary chromatographic techniques. Neuroblastoma suppressor of tumorigenicity 1 (NBL1) is a part of the evolutionarily conserved CAN (Cerberus and DAN) family of proteins, which contain a domain resembling the CTCK (C-terminal cystine knot-like) motif found in several signaling molecules. NBL1 is a tumor suppressor of neuroblastoma and takes part in preventing cells from entering the final stage (G1/S) of the transformation process. NBL1 is produced in small neurons of the dorsal root ganglion. The expression of NBL1 is triggered by MATH-1.

Product Info

Amount : 20 µg
Purification : Greater than 90% as determined by SDS-PAGE.
Content : NBL1 protein solution (1mg/ml) containing 20mM Tris-HCl buffer (pH 8.0), 0.1M NaCl, 10% glycerol and 1mM DTT.
Storage condition : Store at 4°C if entire vial will be used within 2-4 weeks. Store, frozen at -20°C for longer periods of time. For long term storage it is recommended to add a carrier protein (0.1% HSA or BSA). Avoid multiple freeze-thaw cycles.
