

32-4539: Recombinant Human Prothymosin

Alternative Name : ParaT,parathymosin.

Description

Source : Escherichia Coli. PTMS Human Recombinant produced in E.Coli is a single, non-glycosylated polypeptide chain containing 125 amino acids (1-102aa) and having a molecular mass of 13.9kDa. PTMS is fused to a 23 amino acid His-tag at N-terminus & purified by proprietary chromatographic techniques. Parathymosin, also known as PTMS is a member of the pro/parathymosin family. PTMS may mediate immune function by blocking the effect of prothymosin alpha which confers resistance to particular opportunistic infections. Among the diseases associated with PTMS are hepatitis b, and alzheimer's disease.
