

32-4550: Recombinant Human RAB14, Member RAS Oncogene Family

Alternative Name : RAB14 member RAS oncogene family,FBP,bA165P4.3 (member RAS oncogene family),F protein-binding protein 1,ras-related protein Rab-14,small GTP binding protein RAB14.

Description

Source : Escherichia Coli. RAB14 Human Recombinant produced in E.coli is a single, non-glycosylated polypeptide chain containing 238 amino acids (1-215) and having a molecular mass of 26.3 kDa. The RAB14 is fused to a 23 amino acid His-Tag at N-terminus and purified by proprietary chromatographic techniques. RAB14 belongs to the RAB protein family, low molecular mass monomeric GTPases which is found on the cytoplasmic surfaces of distinct membrane bound organelles. RAB14 has a role in vesicular trafficking and neurotransmitter release throughout the body and is expressed at high levels in brain, lung, kidney, spleen and thymus. In addition, RAB14 takes part in the biosynthetic/recycling pathway between the Golgi and endosomal compartments.
