

## 32-4566: Recombinant Human RAB35, Member RAS Oncogene Family

**Alternative Name :** Ras-related protein Rab-35,GTP-binding protein RAY,Ras-related protein Rab-1C,RAB35,RAB1C,RAY.

### Description

Source : Escherichia Coli. RAB35 Human Recombinant produced in E.Coli is a single, non-glycosylated polypeptide chain containing 221 amino acids (1-201 a.a.) and having a molecular mass of 25.2kDa.RAB35 is fused to a 20 amino acid His-tag at N-terminus & purified by proprietary chromatographic techniques. Ras-related protein Rab-35 (RAB35) is restricted to the plasma membrane and endocytic compartments and controls a fast endocytic recycling pathway. Inhibition of Rab35 function leads to the accumulation of endocytic markers on numerous cytoplasmic vacuoles in cells that failed cytokinesis, which is consistent with a central requirement for Rab35-regulated recycling during cell division.
