

32-5023: Recombinant Human Tachykinin-1

Alternative Name : Protachykinin-1,PPT,TAC1,NKA,NKNA,TAC2,NK2,NPK,TAC2,Hs.2563.

Description

Source : Escherichia Coli. TAC1 Human Recombinant produced in E.Coli is a single, non-glycosylated polypeptide chain containing 135 amino acids (20-129 a.a) and having a molecular mass of 15.6kDa.TAC1 is fused to a 25 amino acid His-tag at N-terminus & purified by proprietary chromatographic techniques. Tachykinin-1 (TAC1) belongs to the tachykinin peptide hormone family. TAC1 are a family of peptides which have similar biologic activities and share a common C-terminal sequence, phe-X-gly-leu-met-NH₂, however they have distinct N-terminal sequences that convey receptor specificities. TAC1 is assumed to act as neurotransmitters which interact with nerve receptors and smooth muscle cells. TAC1 induces behavioral responses and serves as vasodilators and secretagogues.
