

32-5081: Recombinant Human Thymocyte Nuclear Protein 1

Alternative Name : MY105,THY28,Thymocyte Protein Thy28,Cyte Nuclear Protein 1.

Description

Source : Escherichia Coli. THYN1 produced in E.Coli is a single, non-glycosylated polypeptide chain containing 245 amino acids (1-225a.a.) and having a molecular mass of 27.8kDa. THYN1 is fused to a 20 amino acid His-tag at N-terminus & purified by proprietary chromatographic techniques. THYN1, is greatly conserved among vertebrates and plant types. THYN1 takes part in the induction of apoptosis. THYN1 in the thymocytes was primarily found in the nucleus, as shown in lymphoma cells, demonstrating that the THYN1 is localized in the nucleus, regardless of the cyclic or resting stage of the cell cycle.
