

32-5251: Recombinant Human Wntless

Alternative Name C1orf139,EVI,GPR177,MRP,Protein wntless homolog,Integral membrane protein GPR177,Protein evenness interrupted homolog,Putative NF-kappa-B-activating protein 373,WLS.

Description

Source : E.coli. WLS Human Recombinant produced in E.Coli is a single, non-glycosylated polypeptide chain containing 155 amino acids (101-232a.a) and having a molecular mass of 17.8kDa. WLS is fused to a 23 amino acid His-tag at N-terminus & purified by proprietary chromatographic techniques. WLS (Wnt trafficking regulator) is a multipass transmembrane protein which regulates the sorting and secretion of Wnt protein. WLS is necessitated for organogenesis during embryogenesis and for the establishment of the anterior-posterior axis. WLS is encoded by a gene which maps to human chromosome 1 and is expressed as multiple alternatively spliced isoforms. WLS promotes various cancers such as glioma tumourigenesis.
