32-5633: Recombinant Measles Virus Large Polymerase (2059-2183) (Discontinued)

Description

Source : Escherichia Coli. The E.Coli derived recombinant protein contains the large polymerase immunodominant regions, 2059-2183 amino acids. Measles, also known as rubeola, caused by a virus, specifically a paramyxovirus of the genus Morbillivirus. To date, 21 strains of the measles virus have been identified. Measles virus (MV) is an enveloped, nonsegmented negative-stranded RNA virus of the Paramyxoviridae family.

Product Info

Amount :	0.5 mg
Purification :	Measles Large Polymerase protein is >95% pure as determined by 10% PAGE (coomassie staining) and RP-HPLC.
Content :	50mM Tris-HCl, pH 8.0, 60mM NaCl, 10mM glutathione, 0.1% sarcosil and 50% glycerol.
Storage condition :	Measles Large Polymerase although stable at 4°C for 1 week, should be stored below -18°C. Please prevent freeze thaw cycles.

For Research Use Only. Not for use in diagnostic/therapeutics procedures.
