32-5637: Recombinant Ebola Zaire

Description

Source: Escherichia Coli. Nucleoprotein (NP) of Ebola virus has strong antigenicity in immune reactions.C-terminal of EBO-Z nucleoprotein was expressed and purified from E. coli, it migrated at 15kDa on SDS-PAGE and pl is 4.87.Ebola Zaire was purified by a proprietary chromatographic technique. Ebolavirus (EVD) belongs to the Filoviridae family of proteins which is comprised of a single-strand, non-infectious RNA genome. EVD genome is about 19,000 base pairs long and covers 7 genes in the order 3'-UTR-NP-VP35-VP40-GP-VP30-VP24-L-5'-UTR. There are 4 different ebolaviruses such as: Zaire (EBO-Z), Sudan (EBO-S), Cote d'Ivoire (EBO-CI) and Reston (EBO-R) that differ in amino acid sequence and location of where the gene overlaps. Similar to filoviruses and ebolavirions, EVD is a filamentous element that could appear in 3 forms: shepherd's crook, U shape or a 6 shape. Ebolaviruses may be coiled, toroid, or branched. Most ebolavirions are 80nm wideand 14,000nm long.

Product Info

Amount: 0.5 mg

Purification: >95% pure as determined by 12% SDS-PAGE (Coomassie blue stain).

Content: Ebola Zaire protein solution (0.78mg/1ml) is supplied in Phosphate buffer and 0.02% sodium

azide.

Store at 4°C if entire vial will be used within 2-4 weeks. Store, frozen at -20°C for longer periods

Storage condition: of time. For long term storage it is recommended to add a carrier protein (0.1% HSA or

BSA). Avoid multiple freeze-thaw cycles.
