

32-5686: Recombinant Dengue Virus Subtype-4 Envelope 22kDa

Description

Source : Escherichia Coli. The E.coli derived recombinant 28 kDa protein is genetically engineered peptide which is derived from Dengue Type-4 Envelope. This region also contains a common antigen for Dengue type 1, 2 and 3. Caused by one of four closely related virus serotypes of the genus Flavivirus, family Flaviviridae, each serotype is sufficiently different that there is no cross-protection and epidemics caused by multiple serotypes (hyperendemicity) can occur. In cell culture experiments and mice Morpholino antisense oligos have shown specific activity against Dengue virus.

Product Info

Amount :	0.5 mg
Purification :	Protein is >95% pure as determined by 12% PAGE (coomassie staining).
Content :	Phosphate buffered saline, pH-7.4.
Storage condition :	Dengue Envelope ST4 although stable at 4°C for 1 week, should be stored below -18°C. Please prevent freeze thaw cycles.
