32-5712: Recombinant Dengue Virus NS1 Subtype 1

Description

Source: Escherichia Coli. The E.Coli derived recombinant protein contains the NS1 Dengue Virus full length Type-1 immunodominant regions, migrates as 45kDa on 12% SDS-PAGE gel. The dengue protein is fused to a 6xHis tag at C-terminus. Caused by one of four closely related virus serotypes of the genus Flavivirus, family Flaviviridae, each serotype is sufficiently different that there is no cross-protection and epidemics caused by multiple serotypes (hyperendemicity) can occur. In cell culture experiments and mice Morpholino antisense oligos have shown specific activity against Dengue virus.

Product Info

Amount: 0.5 mg

Purification: Protein is >95% pure as determined by 12% PAGE (coomassie staining).

Content: Phosphate buffer and 25mM arginine.

Storage condition : Dengue NS1, ST1 although stable at 4°C for 1 week, should be stored below -18°C. Please

prevent freeze thaw cycles.
