

90-2165: Human APOE (Apolipoprotein E) Pre-Coated ELISA Kit

Application : ELISA

Reactivity : Human

Description

This assay employs an antibody specific for Anti-human APOE coated on a 96-well plate. Standards and samples are pipetted into the wells and APOE present in a sample is bound to the wells by the immobilized antibody. The wells are washed and biotinylated anti-human APOE antibody is added. After washing away unbound biotinylated antibody, HRP-conjugated streptavidin is pipetted to the wells. The wells are again washed, a TMB substrate solution is added to the wells and color develops in proportion to the amount of APOE bound. The Stop Solution changes the color from blue to yellow, and the intensity of the color is measured at 450 nm.
