

32-7011: Recombinant Human Bone Morphogenetic Protein 2/BMP-2

Gene : BMP2
Gene ID : 650
Uniprot ID : P12643

Description

Source: E.coli.
MW :13.3kD.

Recombinant Human Bone Morphogenetic Protein 2 is produced by our E.coli expression system and the target gene encoding Gln283-Arg396 is expressed. Bone Morphogenetic Protein-2 (BMP-2) is one of the bone-growth regulatory factors that belong to the transforming growth factor-beta (TGF-beta) superfamily of proteins. BMPs are synthesized as large precursor molecules, which are cleaved by proteolytic enzymes. The active form of BMP-2 can consist of a dimer of two identical proteins or a heterodimer of two related bone morphogenetic proteins.
