

32-7165: Recombinant Human Ubiquitin-Conjugating Enzyme E2 T/UBE2T (N-6His)

Gene : UBE2T
Gene ID : 29089
Uniprot ID : Q9NPD8

Description

Source: E.coli.
MW :24.7kD.

Recombinant Human Ubiquitin-Conjugating Enzyme E2 T is produced by our E.coli expression system and the target gene encoding Met1-Val197 is expressed with a 6His tag at the N-terminus. Ubiquitin-Conjugating Enzyme E2 T (UBE2T) is a ligase that belongs to the Ubiquitin-Conjugating Enzyme family. UBE2T accepts the ATP-dependent ubiquitin from the E1 complex and catalyzes its covalent attachment to other proteins. In vitro, UBE2T is able to catalyze polyubiquitination using all 7 ubiquitin Lys residues, but may prefer 'Lys-11', 'Lys-27', 'Lys-48' and 'Lys-63'-linked polyubiquitination. UBE2T is an important factor of the Faconi anemia pathway of DNA damage repair and, upon self-inactivation, may negatively regulate the Faconi pathway.
