Gene : CA10
Gene ID : 56934
Uniprot ID : Q9NS85

Description

Source: Human Cells.
MW :32.82kD.

Recombinant Human Carbonic Anhydrase 10 is produced by our Mammalian expression system and the target gene encoding Gln22-Asn300 is expressed with a 6His tag at the C-terminus. Carbonic Anhydrase X (CA10) belongs to CA family of zinc metalloenzymes, which catalyze the reversible hydration of carbon dioxide in various biological processes such as respiration, renal tubular acidification and bone resorption. While CA10 is a secreted protein without Carbonic Anhydrase activity (i.e., the reversible hydration of CO₂) due to point mutations in the zinc binding site, it has esterase activity. The human and mouse CA10 are expressed in the brain, indicating that they may play a role in brain development.
