Gene : Dkk1
Gene ID : 13380
Uniprot ID : O54908

Description

Source: Human Cells.

MW :27.4kD.

Recombinant Mouse Dickkopf-related protein 1 is produced by our Mammalian expression system and the target gene encoding Thr32-His272 is expressed with a 8His tag at the N-terminus. This gene encodes a protein that is a member of the dickkopf family. It possesses two clusters of ten cysteine residues separated by a linker region. The protein highly expressed in thyroid, small intestine, stomach, liver, placenta, pancreas, uterus, abdominal cavity, bladder and skin. Weaker expression has been detected in colon and spleen. It antagonizes canonical Wnt signaling by inhibiting LRP5/6 interaction with Wnt and by forming a ternary complex with the transmembrane protein KREMEN that promotes internalization of LRP5/6.
