### Description

Source: Human Cells.  
MW :37.43kD.

Recombinant Mouse CD5 Antigen-Like is produced by our Mammalian expression system and the target gene encoding Glu22-VaL352 is expressed with a 6His tag at the C-terminus. CD5L, also known as CT-2,SP-alpha and CD5 antigen-like. It is expressed by the gene Cd5l. The protein is expressed in thymus, liver, spleen and lymph nodes. CD5L contains 3 SRCR domains, which are 102, 101, and 103aa.long. CD5L is glycosylated during post-translational modification. It may play a role in the regulation of the immune system, and seems to play a role as an inhibitor of apoptosis.
