Description

Source: Human Cells.

MW :55.7kD.

Recombinant Human Myelin Associated Glycoprotein is produced by our Mammalian expression system and the target gene encoding Gly20-Pro516 is expressed with a 6His tag at the C-terminus. Human Myelin-Associated Glycoprotein, also known as MAG, Siglec-4, is a cell membrane glycoprotein that is a member of the SIGLEC family of proteins. MAG contains 4 Ig-like C2-type domains and 1 Ig-like V-type domain. MAG is believed to be involved in myelination during nerve regeneration. It is an adhesion molecule in postnatal neural development that mediates sialic-acid dependent cell-cell interactions between neuronal and myelinating cells and Preferentially binds to alpha-2,3-linked sialic acid.
