32-7746: Recombinant Human Follitropin Subunit beta/FSHB (C-6His)(Discontinued)

Gene ID: 2488
Uniprot ID: P01225

Description

Source: Human Cells. MW:13.5kD.

Recombinant Human FSHB is produced by our Mammalian expression system and the target gene encoding Asn19-Glu129 is expressed with a 6His tag at the C-terminus. Follitropin Subunit beta (FSHB) is a secreted protein that belongs to the glycoprotein hormones subunit beta family. The pituitary glycoprotein hormone family includes follicle-stimulating hormone, luteinizing hormone, chorionic gonadotropin, and thyroid-stimulating hormone. FSHB exists in a heterodimer of a common a chain and an unique beta chain that confers biological specificity to thyrotropin, lutropin, follitropin, and gonadotropin. FSHB stimulates development of follicle and spermatogenesis in the reproductive organs. Defects in FSHB are a cause of isolated follicle-stimulating hormone deficiency (IFSHD).

Product Info

Amount : $10 \mu g / 50 \mu g$

Content: Lyophilized from a 0.2 µm filtered solution of PBS, pH7.4.

Lyophilized protein should be stored at -20°C, though stable at room temperature for 3 weeks.

Storage condition: Reconstituted protein solution can be stored at 4-7°C for 2-7 days. Aliquots of reconstituted

samples are stable at -20°C for 3 months.

Amino Acid: NSCELTNITIAIEKEECRFCISINTTWCAGYCYTRDLVYKDPARPKIQKTCTFKELVYETVRVPGCAHHADSLYTYP

VATOCHCGKCDSDSTDCTVRGLGPSYCSFGEMKEVDHHHHHH

Application Note

Always centrifuge tubes before opening. Do not mix by vortex or pipetting. It is not recommended to reconstitute to a concentration less than 100 $\tilde{A} \Box \hat{A} \mu g/ml$. Dissolve the lyophilized protein in ddH2O. Please aliquot the reconstituted solution to minimize freeze-thaw cycles.

Endotoxin: Less than 0.1 ng/Ã[Âμg (1 IEU/Ã[Âμg) as determined by LAL test.
