

32-8127: Recombinant Human D- beta-Hydroxybutyrate Dehydrogenase Mitochondrial/BDH1 (N-6His)

Gene : BDH1
Gene ID : 622
Uniprot ID : Q02338

Description

Source: E. coli.

MW :40.3kD.

Recombinant Human 3-Hydroxybutyrate Dehydrogenase is produced by our E.coli expression system and the target gene encoding Met1-Arg343 is expressed with a 6His tag at the N-terminus. D-Beta-Hydroxybutyrate Dehydrogenase Mitochondrial (BDH) is a member of the short-chain dehydrogenases/reductases (SDR) family. BDH is localized in the mitochondrion matrix. BDH forms a homotetrameric lipid-requiring enzyme of the mitochondrial membrane and has a specific necessity for phosphatidylcholine for optimal enzymatic activity. BDH catalyzes the interconversion of acetoacetate and (R)-3-hydroxybutyrate, the 2 main ketone bodies formed during fatty acid catabolism.
