Uniprot ID : O00762

Description

Source: E. coli.

MW :23.3kD.

Recombinant Human Ubiquitin-Conjugating Enzyme E2 C is produced by our E.coli expression system and the target gene encoding Met1-Pro179 is expressed with a 6His, T7 tag at the N-terminus. Ubiquitin-Conjugating Enzyme E2 C (UBE2C) is a member of the ubiquitin-conjugating enzyme family. The modification of proteins with ubiquitin is an important cellular mechanism for targeting abnormal or short-lived proteins for degradation. UBE2C is required for the destruction of mitotic cyclins and for cell cycle progression. It accepts ubiquitin from the E1 complex and catalyzes its covalent attachment to other proteins. UBE2C acts as an essential factor of the anaphase, promotes complex/cyclosome (APC/C) controls progression through mitosis.
