

32-8338: Recombinant Human Fibroblast Growth Factor 1/FGF-1/FGFa (Ala2-Asp155)

Gene : FGF1
Gene ID : 2246
Uniprot ID : P05230

Description

Source: E. coli.
MW :31.6kD.

Recombinant Human Fibroblast growth factor 1 is produced by our E.coli expression system and the target gene encoding Ala2-Asp155 is expressed. FGF acidic, also known as ECGF, FGF-1 and HBGF-1, is a non-glycosylated heparin binding growth factor that is expressed in the brain, kidney, retina, smooth muscle cells, bone matrix, osteoblasts, astrocytes and endothelial cells. It is a mitogenic peptide that is produced by multiple cell types and stimulates the proliferation of cells of mesodermal, ectodermal, and endodermal origin. Its association with heparan sulfate is a prerequisite for activation of FGF receptors. Internalized FGF acidic migrates to the nucleus where it is phosphorylated by nuclear PKC delta, exported to the cytosol, dephosphorylated, and degraded. Intracellular FGF acidic inhibits p53 activity and proapoptotic signaling.
