

## 32-8746: Recombinant Human CD30/TNFRSF8/CD30L Receptor (C-Fc)

**Gene :** TNFRSF8

**Gene ID :** 943

**Uniprot ID :** P28908

### Description

Source: Human Cells.

MW :65.2kD.

Recombinant Human TNFRSF8 is produced by our Mammalian expression system and the target gene encoding Phe19-Lys379 is expressed with a Fc tag at the C-terminus. CD30, also known as TNFRSF8, is a cell membrane protein of the tumor necrosis factor receptor family, which regulates proliferation/apoptosis and antibody responses. CD30 is expressed by activated, but not by resting, T and B cells. Aberrant expression of CD30 by mastocytosis mast cells and interaction with its ligand CD30L (CD153) appears to play an important role in the pathogenesis and clinical presentation of systemic mastocytosis. CD30 has been considered as a specific diagnostic biomarker of anaplastic large cell lymphoma (ALCL) and classical Hodgkin lymphoma (cHL). CD30 is also a biomarker used for targeted therapy by an antibody-drug conjugate.
