## 30-1034: Anti-CD150 Monoclonal Antibody (Clone:SLAM.4)-Azide free

Clonality: Monoclonal
Clone Name: SLAM.4
Application: FACS
Reactivity: Human
Gene: SLAMF1
Gene ID: 6504
Uniprot ID: Q13291

Alternative Name: CDw150, IPO-3, SLAM family member 1, SLAMF1, SLAM

**Isotype:** Mouse IgG1

Immunogen Information: Human CD150-transfected 300.19 cells

## **Description**

CD150, also known as SLAM (signaling lymphocyte activation molecule) is a 70-95 kDa single chain transmembrane phosphoglycoprotein of the CD2 family. Its extracellular part contains eight potential N-glycosylation sites, and the intracellular tail contains three unique tyrosine-based motifs. These binding sites can be recognized by SH2-binding phosphatases and the adaptor proteins, such as SAP/SH2D1A or EAT-2. The SLAM family receptors are involved in leucocyte activation and contribute to the effective germinal center formation, generation of high-affinity antibody-secreting plasma cells, and memory T and B cells, thereby facilitating long-term immune response. CD150 expression is upregulated after cell activation.

## **Product Info**

Amount: 0.1 mg

**Purification :** Purified by protein-A affinity chromatography

**Storage condition :** Store at 2-8°C. Do not freeze.

## **Application Note**

Flow cytometry: Recommended dilution: 1-5 µg/ml.
