30-1452: Anti-CD64 / FcgammaRI Monoclonal Antibody (Clone:10.1)

Clonality: Monoclonal

Clone Name: 10.1

Application : FACS, IP, WB, IHC, IHC-Fr, ICC, Functional Assay

Reactivity: Human, Non-Human Primates

Gene : FCGR1A
Gene ID : 2209
Uniprot ID : P12314
Format : Purified

Alternative Name : FCGR1A,FCG1,FCGR1,IGFR1

Isotype: Mouse IgG1

Immunogen Information: Rheumatoid synovial fluid cells and fibronectin purified human monocytes

Description

CD64 (FcgammaRI) is a cell surface receptor for Fc region of IgG. It is composed of specific ligand binding alpha subunit and promiscuous gamma subunit, which is indispensable for tyrosine-based signaling. However, even the alpha subunit can transduce signals leading to cellular effector functions. The isoform FcgammaRIa1 binds human IgG with high affinity, has limited myeloid cell distribution, and a relatively large intracellular domain. Products of related genes include FcgammaRIb and FcgammaRIc isoforms, but these specify low affinity IgG receptors if functionally expressed at all. Besides a role in antigen clearance, FcgammaRI (a1) can potently enhance MHC class I and II antigen presentation in vitro and in vivo.

Product Info

Amount: 0.1 mg

Purification : Purified by protein-A affinity chromatography

Storage condition : Store at 2-8°C. Do not freeze.

Application Note

Flow Cytometry Recommended dilution:5 ̸µg/ml

Immunoprecipitation Western Blotting Immunohistochemistry Application note: There can occur problems with paraformaldehyde fixation Immunohistochemistry (frozen sections) Application note: There can occur problems with paraformaldehyde fixation Immunocytochemistry Functional Application blocking of IgG binding to the FcgammaR1
