## 30-1382: Anti-GABA B receptor GB1a subunit Polyclonal Antibody(Discontinued)

**Clonality:** Polyclonal

Application :WBReactivity :MouseFormat :PurifiedIsotype :Rabbit IgG

Immunogen Information: Synthetic peptide (coupled with THG) derived from aminoacid sequence 100-124 of mouse

GABA B receptor 1. The sequence has 100% homology with rat and human.

## **Description**

GABA B receptor is a G-protein-coupled inhibitory receptor of gamma-aminobutyric acid (GABA), and has important functions in brain by inhibition of adenylyl cyclase and modulation of G-protein-gated Ca2+ and K+ channels. GABA B receptor is comprised of two subunits, GB1 and GB2 with N-terminal extracellular and C-terminal intracellular domains. The GB1 subunit plays a critical role in ligand binding, whereas the GB2 subunit contains the determinants required for G-protein signaling. Multiple allosteric interactions between the two subunits are required for correct functioning of the receptor. There are two N-terminal splice variants of GB1 subunit, termed GB1a and GB1b; their expression in the central nervous system changes during the ontogenesis and differs between various regions of the brain.

## **Product Info**

Amount: 0.1 mg

**Purification :** Purified from rabbit serum by precipitation methods

**Storage condition :** Store at 2-8°C. Do not freeze.
