10-3563: Monoclonal Antibody to Rat CD26 (clone: 5E8)(Discontinued)

Clonality: Monoclonal

Clone Name: 5E8

Application: IP,ELISA,WB

 Reactivity :
 Rat

 Gene :
 Dpp4

 Gene ID :
 25253

 Uniprot ID :
 P14740

Alternative Name: DPP IV, GP110 glycoprotein, T-cell activation antigen CD26

Isotype: Mouse IgG1

Description

Dipeptidyl peptidase IV (DPP IV) is widely distributed in a number of mammalian tissues and is suggested to play an important role in various kinds of biological processes. DPP IV (CD26) is a serine-type protease that removes the amino-terminal dipeptide from peptide substrate provided that the penultimate amino acid residue is proline or alanine. DPP IV plays an important role in the reclamation of peptide nitrogen from larger peptides. The monoclonal antibody 5E8 reacts with DPP IV present on the apical surface of epithelial cells in the pancreas, small intestine, colon, and bile duct. Furthermore antibody 5E8 reacts with DPP IV on the laminar portions of the proximal renal tubule cells, and, weakly, on the glomeruli.

Product Info

Amount: Monoclonal Antibody to Rat CD26 (clone: 5E8)(Discontinued) / 500 µg

Content: 0.2 µm filtered antibody solution in PBS, containing 0.02% sodium azide and 0.1% bovine serum

albumin.

Storage condition:

Product should be stored at 4 °C. Under recommended storage conditions, product is stable for

one year.
