

32-20105: Animal-Free Recombinant Human FGF-9(Discontinued)

Reactivity : Human, Mouse

Alternative Name : Fibroblast Growth Factor-9, GAF (Glia-activating factor), HBGF-9

Description

Source: E.coli FGF-9 is a heparin-binding growth factor that belongs to the FGF family. Proteins of this family play a central role during prenatal development, postnatal growth and regeneration of a variety of tissues, by promoting cellular proliferation and differentiation. FGF-9 targets glial cells, astrocytes cells and other cells that express FGFR 1c, 2c, 3b, 3c, and 4. Recombinant Human FGF-9 is a 23.2 kDa protein consisting of 206 amino acid residues.
