Reactivity : Mouse, Rat
Alternative Name : Growth Factor-9, GAF (Glia-activating factor), HBGF-9

Description

Source:E.coliFGF-9 is a heparin-binding growth factor that belongs to the FGF family. Proteins of this family play a central role during prenatal development, postnatal growth and regeneration of a variety of tissues, by promoting cellular proliferation and differentiation. FGF-9 targets glial cells, astrocytes cells and other cells that express FGFR 1c, 2c, 3b, 3c, and 4. Recombinant Murine FGF-9 is a 23.3 kDa protein containing 206 amino acid residues.
