

32-20107: Recombinant Human FGF-10(Discontinued)

Reactivity : Chicken, Dog, Human, Mouse, Rat

Alternative Name : Fibroblast Growth Factor-10, FGFA, Keratinocyte growth factor-2

Description

Source: E.coli FGF-10 is a heparin-binding growth factor that belongs to the FGF family. Proteins of this family play a central role during prenatal development, postnatal growth and regeneration of a variety of tissues, by promoting cellular proliferation and differentiation. FGF-10 is most related to KGF/FGF-7, and is expressed during the development and, preferentially, in adult lungs. It signals through FGFR 2b. Recombinant Human FGF-10 is a 19.3 kDa protein consisting of 170 amino acid residues.
