32-20198: Animal-Free Recombinant Human IL-1Alpha (Discontinued)

Reactivity: Human, Mouse

Alternative Name: Hematopoietin-1, Lymphocyte-activating factor (LAF), Endogenous Pyrogen (EP), Leukocyte,

Endogenous Mediator (LEM), Mononuclear Cell Factor (MCF)

Description

Source:E.coliIL-1Alpha is a non-secreted, proinflammatory cytokine produced in a variety of cells, including monocytes, tissue macrophages, keratinocytes, and other epithelial cells. Both IL-1Alpha and IL-1Beta bind to the same receptor and have similar, if not identical, biological properties. These cytokines have a broad range of activities including the stimulation of thymocyte proliferation by inducing IL-2 release, Bcell maturation and proliferation, mitogenic FGF-like activity and the release of prostaglandin and collagenase from synovial cells. However, whereas IL-1Beta is a secreted cytokine, IL-1Alpha is predominantly a cell-associated cytokine. Recombinant Human IL-1Alpha is an 18.0 kDa protein containing 159 amino acid residues.
