32-20336: Recombinant Human IL-4(Discontinued)

Alternative Name : BCGF, BCDF, B cell stimulating factor (BSF-1)

Description

Source: *E.coli*
IL-4 is a pleiotropic cytokine that regulates diverse T and B cell responses including cell proliferation, survival and gene expression. Produced by mast cells, T cells and bone marrow stromal cells, IL-4 regulates the differentiation of naive CD4+ T cells into helper Th2 cells, characterized by their cytokine-secretion profile that includes secretion of IL-4, IL-5, IL-6, IL-10, and IL-13, which favor a humoral immune response. Another dominant function of IL-4 is the regulation of immunoglobulin class switching to the IgG1 and IgE isotypes. Excessive IL-4 production by Th2 cells has been associated with elevated IgE production and allergy. Recombinant Human IL-4 is a 15.1 kDa globular protein containing 130 amino acid residues.

Product Info

Amount :	5 µg / 20 µg
Purification :	Purity: >= 98% by SDS-PAGE gel and HPLC analyses.
Content :	This recombinant protein is supplied in lyophilized form.
Storage condition :	Lyophilized: -20oC to -80oC Reconstituted: 2oC to 8oC for one week
Amino Acid :	MHKCDITLQE IIKTLNSLTE QKTLCTELTV TDIFAASKNT TEKETFCRAA TVLRQFYSHH EKDTRCLGAT AQQFHRHKQL IRFLKRLDRN LWGLAGLNSC PVKEANQSTL ENFLERLKTI MREKYSKCSS

Application Note

The ED_{50} as determined by the dose-dependent stimulation of human TF-1 cells is <= 0.2 ng/ml, corresponding to a specific activity of >= 5 x 10^6 units/mg.

For Research Use Only. Not for use in diagnostic/therapeutics procedures.
