### 32-20247: Animal-Free Recombinant Human VEGF165(Discontinued)

Reactivity: Cow, Guinea Pig, Human, Mouse, Pig, Rabbit, Rat, Sheep

Alternative Name: Vascular Endothelial Growth Factor, Folliculostellate cell-derived growth factor, Glioma-derived

endothelial cell mitogen, VEGF-A

# **Description**

#### Source: E.coli

VEGF is a potent growth and angiogenic cytokine. It stimulates proliferation and survival of endothelial cells, and promotes angiogenesis and vascular permeability. Expressed in vascularized tissues, VEGF plays a prominent role in normal and pathological angiogenesis. Substantial evidence implicates VEGF in the induction of tumor metastasis and intra-ocular neovascular syndromes. VEGF signals through the three receptors; fms-like tyrosine kinase (flt-1), KDR gene product (the murine homolog of KDR is the flk-1 gene product) and the flt4 gene product. Recombinant Human VEGF165 is a 38.2 kDa, disulfide-linked homodimeric protein consisting of two 165 amino acid polypeptide chains.
