

32-20456: Recombinant Murine IL-36RA(Discontinued)

Alternative Name : Interleukin-36RA, FIL1 delta, IL-1F5, IL-1HY1, IL-1L1, IL-1RP3, IL-1ra Homolog 1, IL-1 delta

Description

Source: E.coli The IL-1 family is comprised of 11 structurally related ligands, including the recently re-named IL-36RA (IL-1F5), IL-36Alpha (IL-1F6), IL-36Beta (IL-1F8), and IL-36Gamma (IL-1F9). The interaction of IL-36 ligands with the IL-1Rrp2 receptor (IL-1R6) can induce various activities, including dendritic cell maturation and activation. IL-36RA can antagonize the NF-kB signaling induced by either IL-36Alpha, Beta or Gamma by binding to the IL-1Rrp2 receptor in a manner that prevents the initiation of functional signaling. Recombinant Murine IL-36RA is an E.coli-derived 16.9 kDa protein containing 154 amino acid residues.
